

Markus Rescue-line Type RLC25

Markus Rescue-line type RLC is intended for boats, inland vehicles, on snowmobiles and for hikers travelling near lakes and on ice. The Rescue-line enables a rescuer to reach quickly when he/she is in a need of a throw line to rescue people in emergencies.

Markus Rescue-line is packed in a Orange PU Throw bag and ready to use. Also available in a Storage pocket.

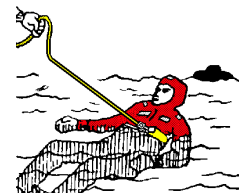

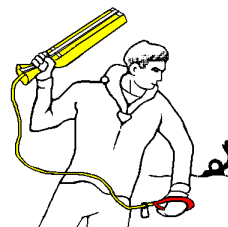

Markus Rescue-lines are equipped with a throw load packed in a floating block that is fastened by a loop at the bottom of the bag. The floating blocks purpose is to enable the bag to float and to minimise injury of the person in water (PIW) when the bag is thrown towards him/her. The Throw-load increases the accuracy of the throw and enables the bag to be thrown again without repacking the line or without the bag to be filled with water before a throw.

Markus Rescue-lines are equipped with a chest-loop so that a rescuer can be attached to a boat or on land that ensures the rescuers safety.

Advantages of the Markus Rescue-line

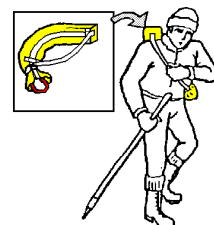

- Solar resistant floating line that meets the requirements of a Lifering / Lifebuoy .
- Is soft and flexible and provides a good grip.
- Equipped with a throw-load that ensures a good throw with out repacking the line.
- Equipped with a chest-loop that ensures the rescuers safety.
- Effective throw.
- Easy packing.
- Compact and easy to use.
- Wall bracket available as an accessory.
